

Importing from 3D Max

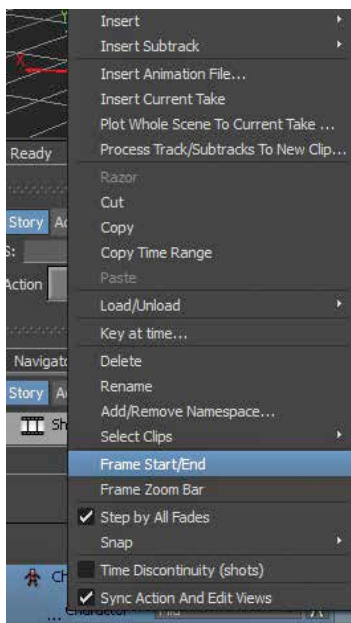

In order to import files, follow the below mentioned steps:

1. Click on the file menu.
2. Go to the import option.
3. Choose to import the file from the type of file selected.
4. Import the file directly to the viewer's window.

Conclusion

Animation itself is a vast field, and includes various steps like character animation, managing projects, developing characters, creating a walk cycle and so on. Creating the ideal animation video may appear to be a difficult task. Remember, when you are creating a clip, you need to prepare scenes in a way that your loop should be executed perfectly. With the various features present in the software today, you can go through the tutorials and create a tempting clip.

In addition to creating a clip, you are provided with the sound option. You can use a soundtrack to accompany your animated film to keep your audience's attention. Everything from thumbnails to asset movement is easily available in the asset browser. All you need to do is work step by step with the tutorial mentioned and proceed with your journey of creating loops, manipulating clips, and importing images or clips from 3D Max. **d**
