

What Are the Features of MotionBuilder?

Although you keep getting new and timely updates on MotionBuilder, here are few of the best features of the software:

- You get a real-time 3D engine.
- With the help of geared workflows, you can make character-building easier and better.
- It also supports devices that capture different motions.
- You get advanced movement and camera options.
- Non-constructive as well as non-linear environments are also available.
- The software also offers live recording to the user.
- It also checks and understands human movements.
- There are stereoscopic tool sets available in the software.
- It also helps in minutely deciding which portions/body parts of the character you have to move.
- It provides a lot of tools that help in smooth interoperability.
- You can put in extensive efforts to create a character that imitates humans.
- The software allows the creation of a story mode in which the characters can be created easily.
- It gives a decisive power to the user as to what portions they want to move at a particular time.
- Combine a series of clips easily to create a new animation or a series.

What Key Points Make Python + MotionBuilder a Great Combination?

It is clear that Python and MotionBuilder make a great combination, and we can use them together for better results. But what makes them this good is something we still need to understand and figure out. Here are some key factors that you should know:

- There is a Python Editor in the software that comes in-built, and allows the coder to evaluate and write the codes interactively.
- This software automatically prints the highlights, results, and executed calls throughout the program.
- You can also get access to the MotionBuilder API through pyfbSDK. All you need to do is import everything from his hub.
- Like all the other Python modules, pyfbSDK is also located in the path.
- By using the FBDelete method, the coder can simply delete all the scenes from the timeline.
- Asset Browser is a way to save scripts into the directory of the software.
