

Notion

Initially released in 2016, Notion is an all-in-one workplace that provides components including kanban boards, databases, wikis, reminders, and calendars. This platform is best suitable for note-making, data management, knowledge, and project task management. Notion is described as a file management tool that permits users to participate in multiple discussions, share their views on running projects, and revise valuable feedback. Along with all cross-platform

apps, this tool is easily accessible via web browsers. It offers a unique tool designed for clipping content that eases out the scheduling tasks, saving documents, managing files, setting reminders, effectively organising work, and keeping agendas.

This tool is available in four versions: Free, Personal, Team, and Enterprise. Therefore, one can go for the plan according to the demand of their work. It also features an account credit system where the users can win a chance to earn credits via referrals.
