

ShareX

First launched in 2007, ShareX is an open-source program for Microsoft Windows, currently available in 13 different languages. It is a free screenshot and screencast program that allows you to capture and record single or multiple screen areas and share them with a simple click on the key. This program is published under the GNU General Public License and is readily available on steam and Microsoft stores.

ShareX mainly serves the demand to capture partial and complete screenshots, and secondly, the need to export screenshots as an image file, explorer to a printer, email attachment, and clipboard. This program also supports animated GIF files and video using FFmpeg. Along with these, there are a variety of tools that improve the desktop image capabilities, such as checksum tool, screen colour picker, selector, on-screen ruler, thumbnails for images and videos, image combiner, and much more.
