

Transmission

Transmission is a cross-platform BitTorrent client which is pretty user-friendly in the sense that it does not bundle an unnecessary number of intrusive advertisements in the UI and they don't block off features of the app in any manner. Ubuntu uses Transmission as the default BitTorrent client for these very reasons. The app is quite lean but has all the features that one needs from a BitTorrent client. It has a low memory footprint no matter however large

the files it has to handle end up being. The user interface has been designed to follow the GNOME Human Interface Guidelines so users will feel at ease.

Transmission also comes with several add-ons for users to extend its functionality. You can use browser extensions, RSS tools and several remote control tools to queue, add or remove downloads even if you aren't at your desk.
