

WPD.app

Window Privacy Dashboard, commonly known as WPD, is a powerful portable app working via windows API. This app is specially designed to access and manage your Windows 10 privacy and conveniently customise privacy-related settings in Windows 10. It is a free portable tool that makes it an appropriate choice for Windows 10 users. The primary responsibility of WPS. app is to manage privacy, customise group policies, tasks, and other settings

related to data collection. This tool also blocks the IP addresses of telemetry and quickly eliminates the pre-installed Microsoft store apps.

Windows 10 privacy settings are complex, therefore the introduction of WPS.app proved as a boon for the users as it's easily accessible, user-friendly, portable, effectively works to protect privacy by disabling windows, and is free of cost. This app disables certain window services, uninstalls unwanted applications, and controls a firewall that quickly helps to detect bottlenecks and protects your privacy.
