

iLovePDF

iLovePDF is a free online platform for reading, editing, merging, splitting, or creating PDF files. Launched by Marco Grossi in the year 2010, the iLovePDF app helps you go completely paperless and works smoothly on mobile devices, making your life so much easier. It is based on the cloud system, which makes downloading files simple. You can also use this website to convert and compress all types of files and documents- Microsoft Word, Powerpoint, Excel, HTML web pages, png and jpg into pdf format. The app also lets you add watermarks and signatures to documents and to protect, unlock and repair files.

In the beginning, the website had only two features with two languages, English and Spanish. But in time, new languages and features have been introduced. Now iLovePDF works in more than 25 languages. In 2011, a premium version of it was launched with a subscription payment of \$3.99. In 2015, the website was remodelled to provide more responsive functions on smaller screens.
