

Hemingway Editor

Hemingway Editor is an online platform you can use to detect errors in your written content and to check its readability. The readability score shows the ease with which a reader can read and understand an article. This tool helps in analyzing the areas that have low readability and provides suggestions to correct them. The readability score is termed as a grade. The acceptable readability grade is from grade 4 to grade 6.

Hemingway Editor is a great tool to advance any article, blog, or content. This editor looks at five areas and suggests corrections in them. It checks the

usage of adverbs, passive words and highlights flowery words which may have simpler alternatives. It also points out if a sentence lacks clarity. A unique colour is devoted to each kind of suggestion, making it easier for you to identify mistakes. For example, adverbs are blue, complex sentences are red, semi-hard sentences are yellow, and passive words are green.
