

ClamAV

ClamAV or Clam AntiVirus is an app designed to protect a device against potential computer virus threats. It is a free app that is compatible with various operating systems like AIX, OSF, Linux, Unix, macOS, Windows, and a few more. It detects malicious codes and provides scrutinized security by email scanning, web scanning, and endpoint security.

ClamAV was launched on 17th August 2007 and has been proved of great use since then. It has been tested several times against the other top antivirus software and has always been placed on the top. When it comes to Linux distros, ClamAV has been the go-to antivirus software of choice for more than a decade. Viruses can cause major loss of data and even financial losses. To secure your computer from any such perils, ClamAV is the way to go.
