

Flameshot

Flameshot is an app that makes screenshotting easy, user-friendly, easy to set up, and uses the DBus interface. Using this, you can easily customise your screenshot in any shape - square, rectangle, or even circle, edit, paint, annotate your screenshot per your desire. The founders of Flameshot have continually updated the software to include as many features as possible, and thus, now it has evolved to version 6.0. Also, this app is compatible with multiple operating systems like Linux, Microsoft Windows, and macOS.

This app caters to all features that one might need while screenshotting that are usually unavailable on a device or need many different programs. Through this, you can also directly upload your saved image to clouds or Imgur. It also saves the image in the most common formats available on any device that are JPG or PNG. So, next time you take a screenshot, ease your task with the Flameshot app.
