

Kazam

Kazam is a screen recording app for when you need to record the contents on a screen. You can use this to save videos that do not come with a download or save option. This app can also record the audio playing along with the video. Also, you can edit and export your recording to other apps. Plus, unlike any other screen recording app, Kazam saves your videos in the best quality, clean, crisp, and high pixelated.

The Kazam app supports VP8 and WebM, which are easily available on all devices. So, the next time you want to save online content while editing it, go for Kazam, as you can easily switch through different functions due to its easy-to-use design.
