

# macOS APPS

## Life on the Mac made easier

**m**acOS was built on Unix and that's where the similarities end for the common user. Over the years, the operating system has grown by leaps and bounds and attained a polished state that has users swearing by the operating system.

Folks transitioning to macOS from the PC will be quite bewildered by the way things have been moved about but for those coming from a Unix or Linux OS, it should be a simple transition. In order to make life easier for all those transitioning to the new operating system, we've put together a couple of must-have apps for the macOS that will help you improve productivity and come up to speed.
