

Airmail

Airmail has been around for a long time and is one of the most mentioned third-party mail applications. Airmail works with all major email providers, including iCloud, Exchange, Outlook, Google, Yahoo, and IMAP. Airmail, like Outlook, allows the user to snooze an email to a later date/time. You may make a PDF out of an email, mute/block senders, or generate a to-do list; Airmail

offers a lightweight to-do list built-in. The list of actions you may perform on a message is extensive.

Airmail is quick, responsive, and reliable. It provides greater functionality and flexibility than comparable applications while maintaining a contemporary appearance and workflow. For most Mac users, this program provides the greatest combination of functionality and simplicity of use. Airmail is an excellent match if you want email software with a lot of knobs to play with. Airmail is free software with the option to subscribe to Airmail Pro for \$9.99/year or \$2.99/month to get access to extra features.
