

AppCleaner

AppCleaner is a disk management tool for your Mac that can delete any executable item you placed on your computer, but especially system files and preferences. It's a free and simple app to use; just open it and then drag the icon of the app you wish to delete onto AppCleaner. The program will gather all system files created and ask you whether you wish to delete them.

It enables you to permanently remove applications and prevents app-related data from cluttering your Mac.

AppCleaner is the best option if you want to remove applications and apps that you haven't used in a while. Rather than deleting all related files at once, the AppCleaner allows you to individually inspect files before removing them. AppCleaner can also locate the relevant items for you. AppCleaner is a free app, and the app may be downloaded on the company's website.
