

Bartender

Surtees Studios' Bartender can make your Mac Menubar work harder for you by providing a neater appearance – but not all applications play well. The update adds a new Quick Reveal feature, which exposes hidden menu bar app icons when the cursor lingers over an empty area in the menu bar. Of course, you may activate Bartender by clicking on its menu bar icon, and you can even choose a delay before hidden icons show.

Bartender 4 is exclusively available for macOS Big Sur. Big Sur Bartender 4 could only be built to operate with the latest version of macOS because of the significant changes in macOS. A Bartender 4 license may be used with Bartender 3. It includes a four-week trial period, after which Bartender 4 will cost \$15, with a 50% discount for those who hold a license to any prior version of Bartender.
