

Aldiko Book Reader

Aldiko is a mobile application that allows users to read books on the go. The app supports Android and iOS users to browse thousands of books online and then download them into the personal library. The user interface resembles the bookshelf that makes the navigation and searching of e-books easy. Users can adjust the background colour, brightness, page turn mode, font type, and font size.

The features include in-app browsing, book downloading, switching themes between day and night, customised navigation modes, resuming reading where the user left off, adding bookmarks, sharing books with others, editing book information, sorting books, dictionary lookup, etc. All these features enhance the user's reading experience and make it one of the perfect book reading apps. The app is easy to use for even new users. It is a very light app that installs quickly and offers an attractive interface with basic menu options.
