

IFTTT

IFTTT is a mobile-based app that allows users to connect different devices and apps. The app enables all the devices and apps of the user and makes them work together performing a specific task. It was created to develop an app that can act as a primary connectivity platform. It can automate repetitive tasks or create workflows for the connecting apps that were never supposed

to work together. IFTTT offers many useful features. The app has compatibility with 650+ services and brands consisting of Dropbox, Uber, Gmail, Twitter, Pinterest, Withings, and GE smart appliances.

Examples of IFTTT are adding photos from Instagram to Dropbox and adding songs to the Spotify playlist from most frequently played songs on YouTube. IFTTT offers both free and paid plans. Additionally, there are many business plans available in IFTTT.
