

MX Player

MX Player offers valuable features such as pinch-to-zoom and the ability to shift subtitles around. MX Player has been around for a long time and offers features such as subtitle gesture controls and video panning. It has enhanced hardware acceleration as well as subtitle compatibility. It allows multiple printouts of the same video. With the assistance of the new HW decoder, you can apply hardware acceleration to additional movies.

MX Player is the first video player for Android that enables multi-core decoding. The layout design and themes utilized are excellent and fashionable. By pinching and swiping across the screen, you may quickly zoom in and out. Zooming and panning are other options. To make things go smoothly, you can use features like scroll forward/backwards to navigate to the next/previous text, up/down to move text up and down, and zoom in/out to alter the font size.
