

Textra

Textra is a simple SMS app with a plethora of options for power users. Textra provides many customization possibilities, including different theme colours, alerts, and per-contact settings. SMS scheduling, fast responses, enhanced group messaging, SMS blocking, and other features are also included. Textra's most remarkable feature is its capability for threaded discussions. Textra makes reading and replying to SMS messages easier and more comfortable if you use it for lengthy discussions. There are two choices for swiping your support on each message or thread. Swiping left on a message or chat displays the trash symbol for deletion.

Google Android Messages are around 20-25MB, and the Textra app brings it down to 6-8MB. It also includes direct support for Android Wear, Pushbullet, MightyText, and other third-party apps. The majority of the features are free to use. To access the pro version, there is a single in-app payment of \$2.99.
