

Night Sky

Night Sky is one of the best applications offered by Apple. It runs on AR technology and showcases the potential of this tech through the app. When pointed towards the night sky, this application shows the augmented reality of the sky map. This stargazing application of Apple shows thousands of stars, satellites, constellations, and planets. This 'personal planetarium' has won many awards.

This application's compatibility with the Apple Watch is additionally interesting. The Night Sky application supports the Apple Watch, allowing the users to look at the sky on their watches. The application also uses the celestial compass to identify visible objects. You get updates on the app about the best times to

sky gaze and future events of astronomical importance. The new addition of ARKit has made things even better as now the application can create a virtual reality of planets revolving around us.
