

Photomath

Photomath is an award-winning AI-oriented application for iOS users. This application uses photos as a medium to help the user solve mathematics problems. The app is a boon for every student who wants to overcome their fear of Mathematics by learning how to answer Maths questions fast and easy. The first thing that you need to do is scan the math problem (printed or hand-

written) using your mobile's camera. After this, you can automatically check whether the scanned problem is correct or not. Once you submit the Maths problem, you will receive the solution to the problem with detailed explanations.

Checking the step-by-step explanation of the problem helps students, parents and teachers understand the problem better. The app shows different methods and multiple explanations for an answer. Multiple animations are shown on your screen at every step. Photomath explains every step the way a teacher does to the students in a classroom with a marker and board.
