

6. After you have created partitions, the storage is set. The next thing is to specify a network host and then designate a hostname and enter the system credential for the local user.

<https://www.tecmint.com/>

7. Now that the hostname has been designated, you have to install the OpenSSH Server Package.
8. After you have gone through these processes, a message will flash on the screen saying, the Ubuntu 20.04 Server Installation Started.
9. The system will start to reboot. After the reboot has been completed, login into the Ubuntu Linux server and confirm that the operating system is installed correctly.

```
