

is a great diversity in the distribution, it makes it harder for malware to disrupt your system. In addition, unlike Windows, Linux takes proper care of root access.

Open-source: Linux is one of the first open-source technologies that allows you to install source code and change it the way you want. This means you do not have to pay anything once you start using Linux. Plus, there are thousands of free software available, and unlike Mac and Windows, this operating system does not keep you in a free software loop.

Effortless to use: Not to mention Linux is the most effortless operating system to use if you are well aware of the basics. No matter what people say, Linux is much easier to use than Windows. Plus, it is way less complicated. In addition, in this operating system, you get the chance to customize it. Moreover, it is lightweight, so it does not affect the productivity of heavy applications.

Demerits of Linux Distros

Open-source: Being open-source can also be an issue. This means where a large community supports Windows; the Linux distro is supported by none. So, if they want support from different channels, they will have to pay a fee for it. However, you can find many blogs that support Linux distribution issues. Also, if you get yourself an experienced Linux administrator, they can find the answer for you.

Best Linux Distros for server administration

The Linux server is generally preferred by programmers and developers as it does not require any extra specifications. Therefore, let us look at some of the best Linux Distros for server administration.

1. Ubuntu

One of the best Linux Distros is Ubuntu. It is an open-source Debian-based system that was developed by Canonical. Now let us look at the pros and cons of using Ubuntu.

Pros:

- Helps in enhancing the performance of the system.
- Provides high flexibility and scalability and secures data centers.
- It easily runs commercial software that can work for auditing and compliance.
