

CHAPTER #02

A screenshot of a Linux terminal window titled 'mark@linux-desktop: /tmp/tutorial'. The window displays the manual page for the 'uniq' command. The terminal has a dark background with light-colored text. The menu at the top includes 'File Edit View Search Terminal Help'. The title bar shows 'UNIQ(1)' on the left and 'User Commands' on the right. The content of the manual page is as follows:

```
NAME
    uniq -- report or omit repeated lines

SYNOPSIS
    uniq [OPTION]... [INPUT [OUTPUT]]

DESCRIPTION
    Filter adjacent matching lines from INPUT (or standard input), writing
    to OUTPUT (or standard output).

    With no options, matching lines are merged to the first occurrence.

    Mandatory arguments to long options are mandatory for short options
    too.

    -C, --count
        prefix lines by the number of occurrences

Manual page uniq(1) line 1 (press h for help or q to quit)
```
