

19. gedit <filename>

This is a GUI text editor, something like the notepad in windows. They have the same function, all you need to do is put the required file name in the given space and start editing the text in that file.

20. sudo gedit <filename>

If you want to edit a file or number of files with SU privilege from your account, then this command has to be used. Apart from this it works as the text editor like the one given just above this. This command also gives the editors a chance to define their privilege even later.

```

mark@linux-desktop: /tmp/tutorial
File Edit View Search Terminal Help
mark@linux-desktop:~$ mkdir /tmp/tutorial
mark@linux-desktop:~$ cd /tmp/tutorial
mark@linux-desktop:/tmp/tutorial$ mkdir dir1 dir2 dir3
mark@linux-desktop:/tmp/tutorial$ mkdir
mkdir: missing operand
Try 'mkdir --help' for more information.
mark@linux-desktop:/tmp/tutorial$ cd /etc ~/Desktop
bash: cd: too many arguments
mark@linux-desktop:/tmp/tutorial$ ls
dir1  dir2  dir3
mark@linux-desktop:/tmp/tutorial$

```

Learn the tricks to use these commands together

21. sudo poweroff

This one is pretty self-explanatory. It will shut down the system as soon as you run this command.

22. sudo halt

Sudo halt is another function that helps all the beginners in powering off the system. So if you pair it with -p it would work as a poweroff command for you.

23. sudo reboot

This is another self explanatory command that can be used in Linux. Sudo
