

## 50. sudo su

This command will substitute your user account with the super user account for whichever command you run.

## 51. clear

Just like the name suggests, this command helps in clearing the screen so that you can start afresh.

## 52. exit

This is a terminating command and it will help in exiting from the terminal. So make sure that you are certain of exiting the terminal before using this command.

## Conclusion

So these were the top 52 commands that every beginner should understand and learn during their command line and structure practice. All these help in pacing up your work so that you finish your task early. There are several things that you would learn by using these commands. Pairing and combining them with each other will also give you better results because you will be able to do multiple tasks by running a single command. Make sure all that is done once you learn these by heart. Try them out one by one while writing a program.

Once you have learnt and integrated these commands in your working, you can then move on to the other list of commands and know their workings too.
