

folder and they must gain administrative rights to change any other file on the system part.

### **/lib – Essential Shared Libraries**

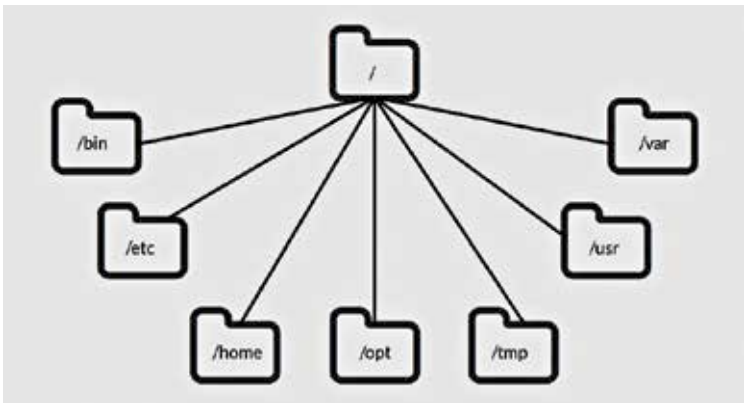

The /lib directory includes libraries required for the /bin and /sbin folder's essential binaries. /usr/lib contains the libraries required by binaries in the /usr/bin subdirectory.

### **/lost+found – Recovered Files**

A lost+found folder exists in every Linux file system. A file system check is conducted at the next boot if the file system crashes. Any damaged files discovered will be saved to the lost+found folder. It allows you to restore maximum data.

### **/media – Removable Media**

Subdirectories in the /media directory are used to mount removable media peripherals introduced into the computer. For example, when we put a floppy into our Linux system, a folder is formed in the /media directory. Within this directory, you may access the data of the floppy under /media/floppy.

File structure

### **/mnt – Temporary Mount Points**

The system administrators mount temporary file systems in the /mnt directory when utilizing them. For example, you may mount a Windows disk at /mnt/windows to do specific file recovery procedures.
