

```
hamid@hamid-VirtualBox: -
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

hamid@hamid-VirtualBox:~$ touch ~/.bash_profile
hamid@hamid-VirtualBox:~$ open ~/.bash_profile

Command 'open' not found, did you mean:
  command 'pen' from deb pen (0.34.1-1build1)
  command 'gopen' from deb gnomstep-gui-runtime (0.27.0-5build2)
  command 'wopen' from deb gworkspace.app (0.9.4-2)

Try: sudo apt install <deb name>

hamid@hamid-VirtualBox:~$
```

Terminal Operators in Ubuntu

There are multiple terminal operators in Ubuntu that help in performing complex tasks easily.

Introduction

The terminal in Ubuntu is also referred to as a command line interface (CLI) terminal. The terminal on the Ubuntu platform is often thought to be the holy grail of computer management. There was a time initially when
