

designation considers which user the file corresponds to, and therefore that user can change its access permissions. It is typically restricted when the file gets created.

Permissions are divided into three categories in the Linux world: read, write, and execute, as discussed above.

“Read” access enables you to examine the contents of a file, “write” access allows you to change the contents of a file, and “execute” access will enable you to run a set of instructions, such as a script or a program.

These classifications are applied to three separate classes: user, group, and world. “User” refers to the owner, “group” refers to other users in the same group as the owner, and “world” refers to everyone.

These permissions can also be used to limit folders. You can, for example, give other members of your group access to your home folder’s folders and files, but not to anybody outside of your group. Unless you are working on a collaborative project, you will generally want to limit “write” access to just yourself. You may also make a shared directory that anybody can access and edit the files.

Changing Permissions in Ubuntu

1. GUI

To modify the permissions of a file that you own in Ubuntu, right-click on it and select “Properties.”

You have the option of allowing the Owner, Group, or Others to read and write, read-only, or do nothing. You may also tick a box to enable the file to be executed, which will make it available to the Owner, Group, and Others at the same time.

2. Command Line

You may also use the command line to accomplish this. To display all files in a list, go to a directory with files and run the following command: `ls -al`

You will see a special section beside each file and directory that explains the permissions it has. It appears as follows: `-rwxrwx-r-`

The letters `r`, `w`, and `x` stand for “read,” “write,” and “execute,” respectively. Instead of a “-,” directories will begin with a “d.” You will also note that 10 spaces are worth something. The first may be ignored, and then there are three sets of three. The owner gets the first set, the group receives the second set, and the world gets the third set.
