

How to List Active Processes in Linux (Listing Running Processes)

The active or running processes can be seen through multiple commands. One of them is the top command, through which you get a real-time view of your system. Using the active listings, you can sort out the column according to your preference. The top command provides information about your system, including the system running time or the users attached to the system. Here's an instance of the same.

Listing processes in Linux

```
$ps
PID TTY TIME CMD
18358 tty3 00:00:00 sh
18361 tty3 00:01:31 AbiWord
18789 tty3 00:00:00 ps
$ps -f
UID PID PPID C STIME TIME CMD
amrood 6738 3662 0 10:23:6 0:00 first_one
amrood 6739 0 10:22:54 pts/6 0:00 second_one
amrood 6892 3662 4 10:51:/6 0:00 ps -f
```

Additionally, in the list below are some actions with the top command to make changes in running processes.
