Partition removal

Step 5: Save your changes and exit

To save and write modifications to the disk, use the `w` command.

```

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Syncing disks.

nevena@nevena-VirtualBox: ~$ █

Check space

Disk Usage Analyzer, System Monitor, and Usage can be used to determine how much disk space is left.

Examine the Disk Usage Analyzer

Using Disk Usage Analyzer, check the free disk space and disk capacity:

From the Activities overview, choose Disk Usage Analyzer. The window will provide a list of file locations as well as their use and capacity. Click one of the items in the list to get a full description of its use. To scan a different place, choose Scan Folder or Scan Remote Folder from the menu.

The information is organized by Folder, Size, Contents, and the date the data was last modified. More information may be found in Disk Usage Analyzer.

Consult System Monitor

System Monitor may be used to examine the free disk space and disk capacity.

From the Activities overview, launch the System Monitor application.

To see the system's partitions and disk space consumption, go to the File Systems tab. The data is presented in the following categories: Total, Free, Available, and Used.
