

```
$ sudo apt upgrade
```

If you are going to use “sudo” the first time within the session, then you may be asked to provide the password. This is being done just to confirm your right privileges. You can also be asked to confirm the installation by pressing “Y” and then “ENTER.”

Step 2: Apache Installation and its Verification

As the next step, you may need to download and install Apache on your system. You can complete this step through the Ubuntu software repository. The following command can complete this step:

```
$sudo apt install apache2
```

```
younis@younis-VirtualBox:~$ sudo apt install apache2
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following additional packages will be installed:
  apache2-bin apache2-data apache2-utils libaprutil1
  libaprutil1-dbd-sqlite3 libaprutil1-ldap
Suggested packages:
  apache2-doc apache2-suexec-pristine | apache2-suexec-custom
The following NEW packages will be installed:
  apache2 apache2-bin apache2-data apache2-utils libaprutil1
  libaprutil1-dbd-sqlite3 libaprutil1-ldap
0 upgraded, 7 newly installed, 0 to remove and 22 not upgraded.
Need to get 1,621 kB of archives.
After this operation, 7,215 kB of additional disk space will be used.
Do you want to continue? [Y/n]

Installation Process

When the installation will get completed perfectly the server will start automatically. You can also verify the server installation by checking its status through the following command:

```
younis@younis-VirtualBox:~$ sudo systemctl status apache2
● apache2.service - The Apache HTTP Server
   Loaded: loaded (/lib/systemd/system/apache2.service; enabled;
   Active: active (running) since Thu 2020-05-28 21:45:18 PKT; 2
   Docs: https://httpd.apache.org/docs/2.4/
   Main PID: 14630 (apache2)
   Tasks: 55 (limit: 4037)
   Memory: 5.4M
   CGroup: /system.slice/apache2.service
           └─14630 /usr/sbin/apache2 -k start
             └─14632 /usr/sbin/apache2 -k start
               └─14633 /usr/sbin/apache2 -k start
