

Let's start by setting up everything properly in the InShot account

- Press the settings icon on the right-hand corner at the top to jump to the settings option.
- If you want to improve the video quality, change the video resolution from 720p to 1080p or all the way to 4K.
- Check if the frame rate matches the one you used to record the video. Go to the settings in your Android or iOS device and check if you're recording the video in 30fps or 60fps. Match both for the desired quality.
- Exit the settings.

How to upgrade to InShot Pro?

If you want to upgrade your content; upgrade InShot first! To upgrade to InShot Pro, follow the following steps:

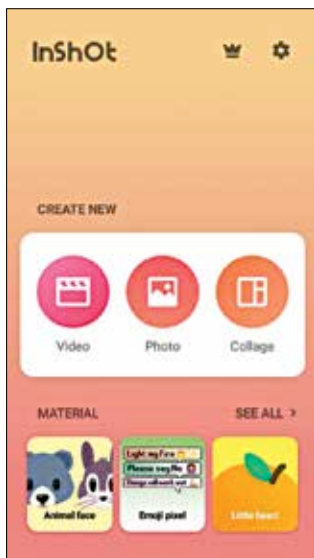

- Open the InShot app and tap on the Pro version.
- You will find monthly, yearly, and one-time purchase pricing options.
- Choose any of these packages as per your needs. Say you choose the one-time purchase package. Then, tap on it to confirm the process.
- Here you will either have to use your touch ID, iTunes password, or face ID to complete the purchase.
- Once you see the blue checkmark and a message stating “You are all set”, you have been upgraded to InShot Pro.

When you've upgraded to InShot Pro, you have access to all the InShot Pro features, and there will be no watermarks or ads interrupting your creative flow.

Benefits of InShot Pro

Struggle to create engaging content? Not sure how to use your smartphone for marketing your services? Inshot can solve your problems. InShot has prime features, and a Pro version, that lets you edit photos, create collages, and develop engaging videos to share on social media platforms like Facebook, Youtube, and Instagram.

Video editing is a time-consuming process that requires hours of screen time.
