

- Once you tap on it, you'll be directed to your phone's gallery to select different video tracks.
- Choose the ones you want to edit together and confirm the process by clicking on the tick mark.

Now, when you've selected different videos, you can start editing the files by adding music, filters, adjusting brightness, saturation, and much more.

Let's start editing

Pinch and zoom tracks

If you pinch on the timeline the original video becomes smaller or you have zoomed out of the timeline. If you do the opposite, you get a closer look at the timeline or you're zooming in for a more detailed view.

Though it's pretty challenging to see the time of the clips, the white bar beneath the effects is the timeline from where you can see the video's time displayed underneath it. This helps to determine how far you are when you scroll through the video.

Swap clips

In the InShot app, you get a feature where you can easily swap the placement of two or more videos. Once you've decided what video to choose and start editing them, it is important to confirm their placement. Let's say you want video B to be at the beginning of video A, but how do you do it? Let's understand it through the following steps:

- Click once on video B, press and hold it for 2 seconds.
- Once you press and hold it, you'll get the option to move these two clips in your chosen place or swap these clips with each other.
- Just move video B to the left and once you're satisfied with the results, confirm the process.
- Click on the arrow button to go back to the timeline to check the final results.

Timing and splitting videos

Let's learn how to trim the videos in Inshot. So, there are a couple of ways you can trim your chosen videos in the InShot app. Let's understand the different methods in detail.

Method 1- Trimming videos

- If you press and hold video A, a white bar will appear that surrounds the entire video clip.
