

fade to black, fade to white, circle transition right to left slide, left to right slide, top to bottom, and bottom to top. You can go through them and choose one depending on what you want to place on the hard cut.

• Supers

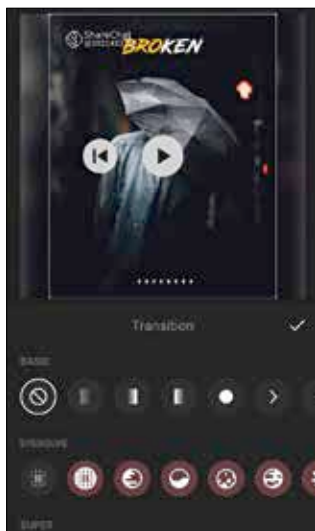

Supers transition effects come as a part of paid version as it's the building block for many other transitions. It mainly creates a 3D square-like transition that seamlessly fills the hard cut between two or more shots. Supers features multiple transition options such as image rotation from left to right, image rotation from right to left, left to right slide, right to left slide, top to bottom slide, bottom to top slide, and more with 3D effects.

• Dissolve

Building on fades, the dissolve transition gradually dissolves from one image to another but with more artistic flair such as circles, bubbles, rays, and so on. It is an effective combination of fade in and fade out transitions where one shot gradually replaces the other shot and is often used in videos to imply a change in location or time.

• Glitch

Another paid but interesting transition effect in InShot is glitch. It's widely used by both established and new editors. This transition leaves a more rugged and flashy look every time there is a change in the shot. All of its effects are mainly rectangular. It is a unique feature for a lot of videos, short films, and high-budget films as well.
