

InShot effects in detail

Apart from all the exciting transitions, the InShot app offers many unique effects that add life to your images and videos.

Before learning where to apply effects, let's look into the different InShot effects and how to apply these while developing high-quality, stunning videos and images. So, here we go!

- **Speed**

Speeding up and slowing down is a popular effect. Creating fast motion and slow-motion videos has become a trend. It adds significant value to the content and delivers a compelling video to fulfill your content marketing needs. To increase or decrease the speed of the existing video, click on the speed icon and adjust it according to your preferences.

- **Flip**

In order to create a mirror image of the existing image or video, the flip effect is taken into consideration. This effect is popular and is mostly present in all video editing apps, including InShot. Clicking on the flip effect creates a mirror-like image that is widely used.

- **Reverse**

Another stimulating effect that is trending on the internet is the reverse effect. By clicking on it in the InShot app, you can simply reverse the video. So, instead of playing from beginning to end, it will play in the reverse.

- **Duplicate**

The duplicate effect in the InShot app lets you create an identical copy of the video that you can use later. You can also UNDO your actions by clicking on the UNDO key.

- **Freeze frame**

Freeze frame is another exciting and popular InShot effect. Using this effect, you can freeze a specific part of the frame in the
