

World's most preferred video editing app

With filters, unseasoned creators can instantly turn their boring and hasty videos into catchy clips that attract thousands of likes and hundreds of followers.

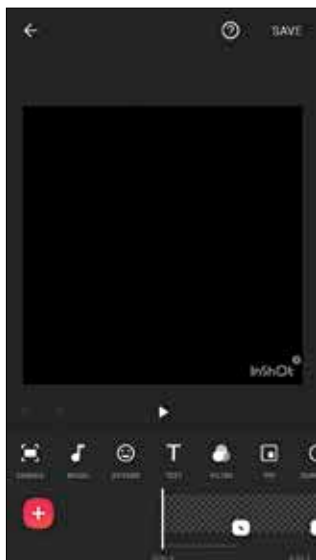

### What do filters do?

When you edit a video or a picture, you deeply study the file and analyse what filters and effects will best integrate with your post. These special effects make considerable changes and multiply your engagement without much effort. It also turns video making into a creative, simplified, and automated process.

While offering a series of unique filters that adds extra charm to your videos, InShot never fails to impress its users through its amazing features and performance. Filters add a subtle layer of perfection that helps minimize glare and reflections, enhances colors, brightens up the shot, reduces light into the lens, and most importantly, serves the purpose of making and posting a video that drives engagement.
