

build content that pays. Let's learn about another exciting part of the InShot app – filters.

Once we are done with adding the InShot effects into video, it's time to add some InShot filters to give it a more artistic view. Before learning how to add filters, let's understand the different InShot filters.

After finishing with the InShot effects, you will encounter the filters icon when you scroll along to the left-hand side. Though it's quite an in-depth feature, the after-effects are amazing. Once you press on the filters icon, you will be displayed three significant options; Effects, Filter, and Adjust. Let's study all three in detail.

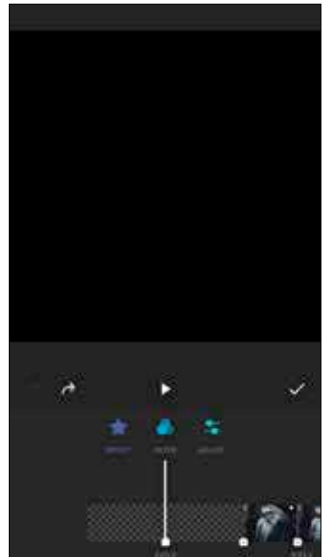

• Effects

When you press on the effects icon, you get loads of options that you can explore and add to intensify the beauty of your video. It comes with features such as basic, glitch, fade, beats, retro, celebrate, style, and distort. Apart from these, there are other effects too that are displayed inside these features. Choose the changes as per your liking and tap on the tick mark to confirm.

• Filter

Filters change the video's exposure, style, and colors as per your wish. When you click on the filters icon, you will get multiple options such as adjusting the brightness, vintage, pink, dark, warm, and much more.

Also, you can increase or decrease the intensity of the effects you are adding to hit the right note. You can also keep an eye on the original image by pressing the icon on the right-hand side, and in case you find it not to your liking, press the UNDO key.

Effect, Filter, Adjust!

• Adjust

Now, after you have already made changes to the original video, it's time to adjust. Press the adjust option. Rather than having a preset style, you can change
