

- **Warmth**

If you want to drive the colors to a warmer side, slide it from left to the right, and in case you like cooler tones such as blue, slide it to right to left. Stop the slider when it looks perfect and tap the tick mark to save the changes.

- **Tint**

Tint adds a hint of color, whereas the slider allows you to darken it or lighten it as per your preference. You can spot the after and before images by pressing on the icon present on the right-hand side.

- **Saturation**

Another popular adjustment that brightens the colors or fades them to the extent that the image turns black and white is saturation.

- **Fade**

As the name suggests, the fade option fades away the brightness, colors, and effects applied to the image or the videos.

Now that you're aware of all the filters that the InShot app offers, we think you're ready to kickstart your editing journey as a video editor. This will allow you to make endless edits as per your liking.

Final thoughts

It would be unfair not to say that InShot is one of the best video editing app that is ruling the market at the moment. The features it offers help you create rich video content and up your content marketing game with just a few taps!
