

- You can also pick the music file from the “My music” option
- Click on the tick mark option to save the changes.

Inserting voiceover

To insert a voiceover in the InShot app, follow the following steps:

- Open the InShot app and click on the voiceover option.
- Once you click on the record icon, there will be a countdown – three, two, one.
- You can now start recording your voice for the video.
- Once you are done, press the stop button and click on the tick mark option.
- The recorded voiceover will be displayed above the timeline.
- Just press, hold and move it around just like any other effect.

The audio tracks, effects, and record

The different sound effects available in the InShot app

• Tracks

When you click on the music bar, you get three major options, out of which track is the first one. Tracks let you import music from iTunes, if you are using an iPhone, or there are hundreds of music options you can choose from based on the mood and feel of the video. Select your favourite music and put it on your timeline to add it to your video.

• Effects

Another important option offered by InShot is Effects. When you press on the effects

Increase or decrease the volume in the InShot app
