

option, you get a list of effects that you add to your video to make it look and sound appealing. Most of these sound effects such as transition effects, popular games, weapons, laughter, and more are free to use. Just press and choose your favorite one that matches the vibe of your video.

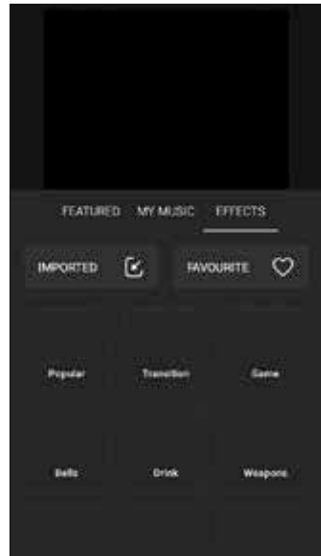

- **Record**

Another great option that is used professionally is the recording option where you can record your own or someone else's voice. Once you press the record option, there will be a countdown – 3,2,1 before you can start recording a voiceover. When you're done, click on the stop button to save the recording. Once you're happy with the final take, press the tick button to confirm the changes.
