

- **Bell**

Bell is yet another widely used audio effect offered by the InShot app. It mainly contains voices of different types of bells such as a doorbell, police car, phone ring, and warning. This sound effect can be used to recreate scenes.

- **Weapons**

An audio effect that is highly appreciated and enjoyed by youngsters is the weapon sound effects. It contains the voices of AK47, cannon, fencing, hit, knife, gun, shooting, stick, and sniper rifle. It is mostly used in streaming game videos, creating gaming effects, or editing a murder scene.

- **Instruments**

Instrument effects are generally used to create a lively and happy feeling. It includes the sounds of various popular instruments like accordion, bass, drum, flute, sitar, violin, and so on. This audio effect is generally used in music videos on YouTube, Instagram, and IGTV.

- **Applause**

This is another exciting audio effect widely used by video editors while editing happy videos to upload on social media platforms like Instagram, Facebook, and YouTube. It is mainly the sounds of cheering, laughing, and applause.

These are some of the most popular sound effects in the InShot app. Remember, the sound effects may be different, but the objective is the same. Bolster your video content so that it may engage large groups of people.

Quick summary

We all know video recording and editing is a time-consuming process that requires high energy levels, enthusiasm, and dedication to produce valuable content. What if you've all three but are still struggling to create rich video content? Well, the problem is your editing app.

There are loads of video editing apps in the world but it's important to pick one that is easy to use, fulfills your requirements, and easily produces high-quality videos. Well, if you're still confused, let us tell you that InShot should be your go-to app.

In this chapter, we learned how to adjust the volume levels, insert audio files, and add a voiceover. We briefly talked about the different sound effects offered by the InShot app, where and how they can be applied.
