

Step 2: Open KineMaster to edit video

After you have downloaded and installed the software on your device, you can open the app to edit your video. You will be welcomed to the landing page from where you can either create a new project or can choose the “Get Projects” option to select any existing template project.

Select the aspect ratio for your project

To start a new project you can click on the “Create New” option, from where you can select the required aspect ratio for your video. Some of the aspect ratios you can choose from include 16:9 (suitable for YouTube), 9:16 (Best for Instagram), and 1:1 for smaller screens.

Step 3: Select the video

When you click on the Next button you can select the video that you want to edit. All the folders containing your videos and images will be displayed on the screen. From here you can select the video to edit and hit the checkmark at the top-right corner. To add more videos repeat the step.

Step 4: Video trimming

To trim the video identify and select the video clip that you want to customize and a light yellow color border will appear. At the top right corner, you can see several trimming options and at the top-right corner of the application, you can see the trim/split option. Along with that, there are many other options like the mixer, speed, reverse, filter, and many others.
