

Plenty of options to choose from to create a stunning video

When you click on the Trim option you will be asked to again select any option from “Trim to Right of the Playhead, Trim to Left of Playhead, Split at Playhead and Split and Insert Freeze Frame”.

If you want to cut a clip from the video that appears just next to the selected position, then choose the option “Trim to Right of Playhead”. The resulting trimmed video will be of a shorter duration. However, if you choose the option “Trim to Left of Playhead” then the resulting video will only have the content before the current position.

The “Split at Playhead” option will divide the video clip into two parts. You can check the progress by hitting the “play” button. If you are satisfied with the edit, then just click on the checkmark at the top to save the trimmed video.

Step 5: Adding text to video

If you want to add text to your video then select the “Layer” option. Soon many other sub-options will appear on the screen. From these options, you can choose the “Text” option. Just write the text of your choice and click “OK”. The given text will appear across the video.

You can drag the text if you want to make it larger or smaller. After finalising the text you can hit the checkmark to save the changes. Other elements like shadow, color, animation effect, and background can also be added to the video. If you want to give some effects to the text, then select the text animation option.
