

This makes importing easier because there are a lot of applications in which you can import a complete folder. Once all your raw videos are in one place, you can start following these steps.

The steps that you need to follow to easily import your files on the timeline and make some quick-cuts are as follows:

Step 1: Import and organize

To import your videos in KineMaster, click on the icon that allows for the addition of videos on your timeline. As soon as you do this, all your videos will start lining up on your timeline. If you want them in some other, click them in that very order. Once all the videos are on your timeline you can proceed to the next step.

Step 2: Sequencing

Sequencing is a part of sorting but then most people do that before getting the videos on the timeline, so you can skip it. If you make sure that sequencing is done right, you will have no problems later on. After aligning the video in the manner you want, you will have to cut the unwanted portion and club the selected videos together. This is how sequencing is important for you.

Step 3: Begin a quick snapping of clips

This is a very important step that you can integrate into your working style while importing the videos. In this, you can simply play the video on your timeline and quickly make some cut points while watching. It will help you in the later stages while you sit for the final editing. You can pick from the cut points you made initially and then repeat every video once done.

Step 4: Delete the clutter

The more chaotic your timeline, the more hectic it will get to edit your video. So, once you have cut the major portion out, delete the clutter from the timeline. Keep only the parts that you need in the final video.

Sorting the video on your timeline

Sorting the videos is a single step that needs to be executed by the editor after importing the videos on the timeline. In this step, you put the imported clips one after the other in the sequence you wish to see it. While sorting the clips, you don't have to do anything out of the box, all you need to do is drag and drop the clips. Once you have made the sequence right, just run through it by playing
