

Editing on the go

Every app on the planet wants a piece of the short-video action. From the ones that popularised it the most such as TikTok, to the ones which entered the scene a little later but have grown tremendously such as YouTube Shorts and Instagram Reels, you can say for certain that short video apps are here to stay. Everyone on these platforms wants to showcase their parts of their lives by acting or dancing or editing fancy transition videos or simply cracking jokes and having fun. To that extent, these short video apps have done a great job at incorporating pretty decent video capturing and editing mechanisms within the apps themselves. And for those starting out, these apps are more than enough.

However, if you want to set yourself apart from the multitude of other creators, then you will have to improve the production value of your videos and there are quite a few interesting ways of doing that. You could spend money on expensive gear that's marginally better at capturing video content, or you could set up a nice environment or studio with proper lighting that will improve your videos by a multiplicative factor or you could use one of the many dedicated video editing apps which are just as powerful as their desktop counterparts. We'd actually recommend that you start off with learning how these video editing apps work because that will significantly expand your horizons and make you explore more creative approaches to getting things done. You can then follow it up with building a proper studio set-up and then
