

- Click on the plus icon to get started.
- Select an aspect ratio for your video. (Note: You can't change the aspect ratio once you pick one and start editing.
- Click on next after you select an aspect ratio.
- Now you have reached the final editing interface of the KineMaster application. Here you can use your desired media for editing.

App settings setup

Before you jump on to creating some cool projects, setting up your app would be the right thing to do. Click on the Settings icon on your home screen to access all your settings.

Under Settings, you will see the following four sections:

- **Account:** This includes your account information, device capability information, and reset settings.
- **Editing:** This includes all your editing settings like the default video duration, default layer duration, and default settings for photo cropping. The photo cropping setting is set to 'Ken Burns/ Crop and Pan', which you can change to either 'fit in screen' or 'fill screen'.
- **Sorting:** This is to control the sorting pattern of all your created projects.
- **Advanced and Experimental settings:** This includes all your advanced audio recording and video settings like amplitude meter display, the frame rate of saved videos, video layer mode, etc.

Selection of different video tracks

Selecting different video tracks in a single project is super easy. Here's how to do it:

- Create a new project on your KineMaster app.
- Select an aspect ratio for your video. Different video publishing platforms require videos with different aspect ratios. For instance, if you are creating a video for YouTube, then the 16:9 aspect ratio would be perfect for you. Fortunately, the platform logo is included in the aspect ratio icon.
- Click on next after you select an aspect ratio.
- After you have reached the final editing interface of the KineMaster application, import your video files into the project for editing.
- The selected video will be added to the timeline, which is your editing workspace.
- You can also add multiple videos one after the other in your editing timeline.
- If you wish to record a new video and bring it to the editing interface, press
