

Video trimming options

Trimming and splitting clips

- To trim the video, you must select the video clip you want to customize, and after selecting it, you can see the clip gets outlined by a light yellow border.
- Then, you can tap on the scissor icon (Trim/Split menu) at the top right corner of the screen to open several trimming options in the same area.
- There you can select four options. Trim to the left of the Playhead, Trim to the right of the Playhead, Split at Playhead and Split and Insert Freeze Frame.
- To cut the clip to only that part of the video that appears after the current position, you may select Trim to Right of Playhead.
- The trimmed video will then, eventually have a shorter duration as compared to the original one.
- Using the Trim to Left of Playhead option, you can also cut the clip to include

Transition effects
