

content only before the current position.

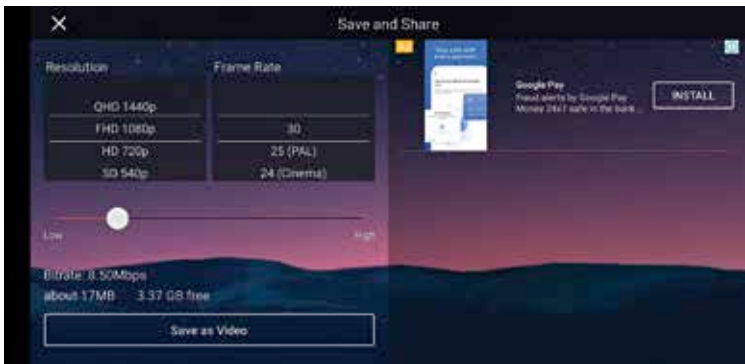

- To divide a video clip, use Split at Playhead.
- To see the progress, you can hit the play button and watch the video as you edit.
- If you are satisfied with the results, tap on the checkmark at the top to save the progress of our work.

Adding transitions to the video

- Here you need to choose the video you want to add transitions. You will see a Plus (+) icon at the end of each video clip.
- To add transitions to the clip, tap on Plus (+), to see options on the right side of the screen.
- From there, you can select various options like classic transitions, 3D transitions, picture-in-picture, some transitions related to texts, and some more.
- After picking one as per your choice, you can tap the tick mark (✓) in the upper section to save your choice.
- After this, if you want to preview your work, you may move the slider to where the transition is and tap on the play button.

Adding text and background music

- To add text to your video, hit the Layer icon to open different options. From those, select Text.
- Now write the text you want and press OK. You may also increase or decrease the size of the font and even select the font of your choice from the options present there.
