Transition Menu

available designs. You are free to add whatever design you like. Check out the 3D transitions that look amazing. Once you've decided the transition to use, touch the top right checkmark to enter it.

Step 3: The job is done!

Sure, this was a simple lesson to learn since creating a transition in KineMaster is so simple. You may also try this on your smartphone. Following the addition of the transition. You may get a preview by pressing the play button and seeing whether it looks okay.

Transitions in KineMaster

Basic

The transition's name is self-explanatory - basic. If the video has any circular objects or forms, this transition will look fantastic. A simple smooth and quick transition is appropriate for brief dynamic videos, such as a video commercial or an Instagram story video. The transition itself is reminiscent of flipping pages in a book. Basic kinds of transitions include effects like Fade to black, Move, Cross dissolve, Spin, Blur, Fade to white, Zoom in/out, Left-to-right, Right-to-left, Upwards, or Top-down.

Dissolve

In addition to the most basic of edits, straight cuts, crossfades, and cross dissolves are your old standbys. All of these phrases refer to the same transition - a slow fade from one shot to the next. The name says it all: you're fading or dissolving, one shot slowly into another.
